Материалы по работе виртуальной машины SecuRom версии 7.33.0017
Все данные были получены при дисассемблировании файла cnc3game.dat (NODVD),
который содержал VM пристроенную в виде секции .memory
Файл был взят с pecypca: http://www.playground.ru/cheats/4932/
В данной редакции файла реверс-инженерами в виртуальную машину были внесены
изменения:
Для корректного декодирования смещений в "Хранилище № 1.5" на всех машинах во
всех островках две инструкции
CPUID
AND EAX, FFFFFFDF
заменены на
MOV EAX, 40F92
т.е. ключ для инструкции ROR, расшифровывающей смещения один и то же = 92h
Неизменяемая структура главного хранилища:
(+0) Xранилище_1.5 = 01FD1000
(+С) ВХОД В ВИРТУАЛЬНУЮ МАШИНУ = 020А5000
(+14) ВХОД В ГЛАВНОЕ ХРАНИЛИЩЕ = 020А7000
(+20) Хранилище В СЕКЦИИ .ARTEM = 01212A10
(+28) Хранилище №2 = 020А6000
Действующий переходник в VM для баз запросов:
00D44F40
         JMP DWORD PTR DS:[12E043C]
Все упомянутые в документе островки без обфускации!
В документе:
Способ №1. Вся цепь вызова для
0040A00D CALL 0040A370
Способ №1А. Вся цепь вызова для
0044F669 CALL EAX
                                                  SetUnhandledExceptionFilter
Способ №2. Часть островков для прямого хода алгоритма.
Информация по логике работы способа №2.
*****************************
Иерархия в использовании регистров процессора на островках
Абсолютно закрепленные регистры:
ЕВХ - Главное хранилище
CL(ECX) - ROL-байт
Плавающие регистры:
EDI – Ресурс (+10) в главном хранилище
ESI – Вспомогательный
EDI - Ячейки в главном хранилище
EAX/EDX/EDI/ESI - DWORD по виртуальному указателю (V-ESP) или DWORD в ячейках
```

EAX/EDX/EDI - В качестве операндов для прыжка на следующий островок

```
Способ №1.
0040A00D CALL 0040A370
Стрелка:
0040A370
          JMP DWORD PTR DS:[15000C4]
База запроса:
0157C830
           PUSH OFFSET 0157C84A
0157C835
          PUSH 0040365A
         PUSH OFFSET 00D611CC
0157C83A
          PUSHFD
0157C83F
0157C840 SUB DWORD PTR SS:[ESP+4],1C28C
0157C848
          POPFD
0157C849
          RETN
Обвертка виртуального стека для вызова:
0157C84A
Верхушка виртуального стека:
014EA729
Окончание виртуального стека:
01557450
Количество используемых DWORDs в виртуальном стеке:
12
Адрес запрашиваемой функции:
015110F0
      02B3B7CE
